

Всемирная Организация Здравоохранения (ВОЗ) предупреждает об опасности и о бесполезности использования неподтвержденных и неопробованных методов лечения. Также РДГ рассказывает об особенностях поведения людей с диабетом при коронавирусной инекции.

Большинство людей, которые имели COVID-19 оправляются от него.

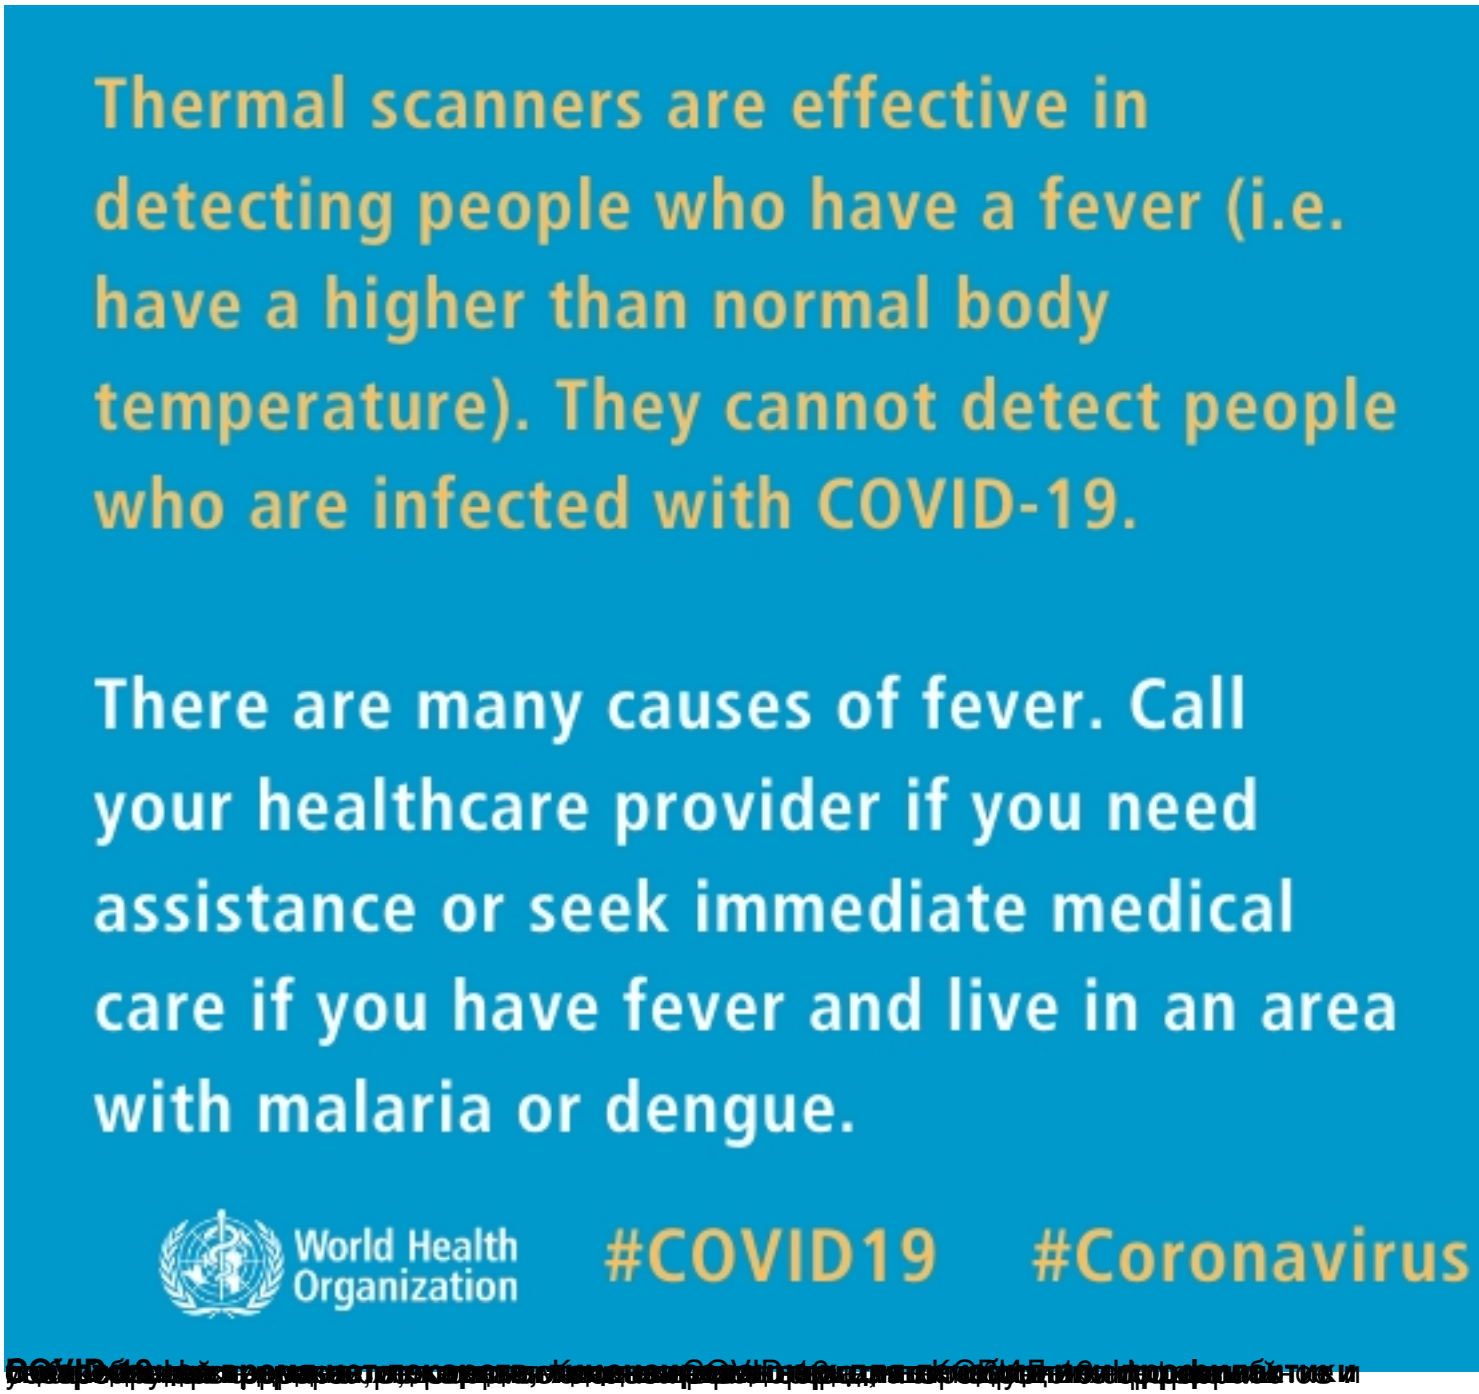

Большинство людей, которые получают COVID-19, имеют легкие или умеренные симптомы и могут выздороветь благодаря вспомогательному уходу. Если у вас есть кашель, лихорадка и затрудненное дыхание обратиться за медицинской помощью рано - сначала позвоните в свое медицинское учреждение по телефону. Если у вас есть лихорадка и вы живете в районе с малярией или лихорадкой Денге, немедленно обратитесь за медицинской помощью.

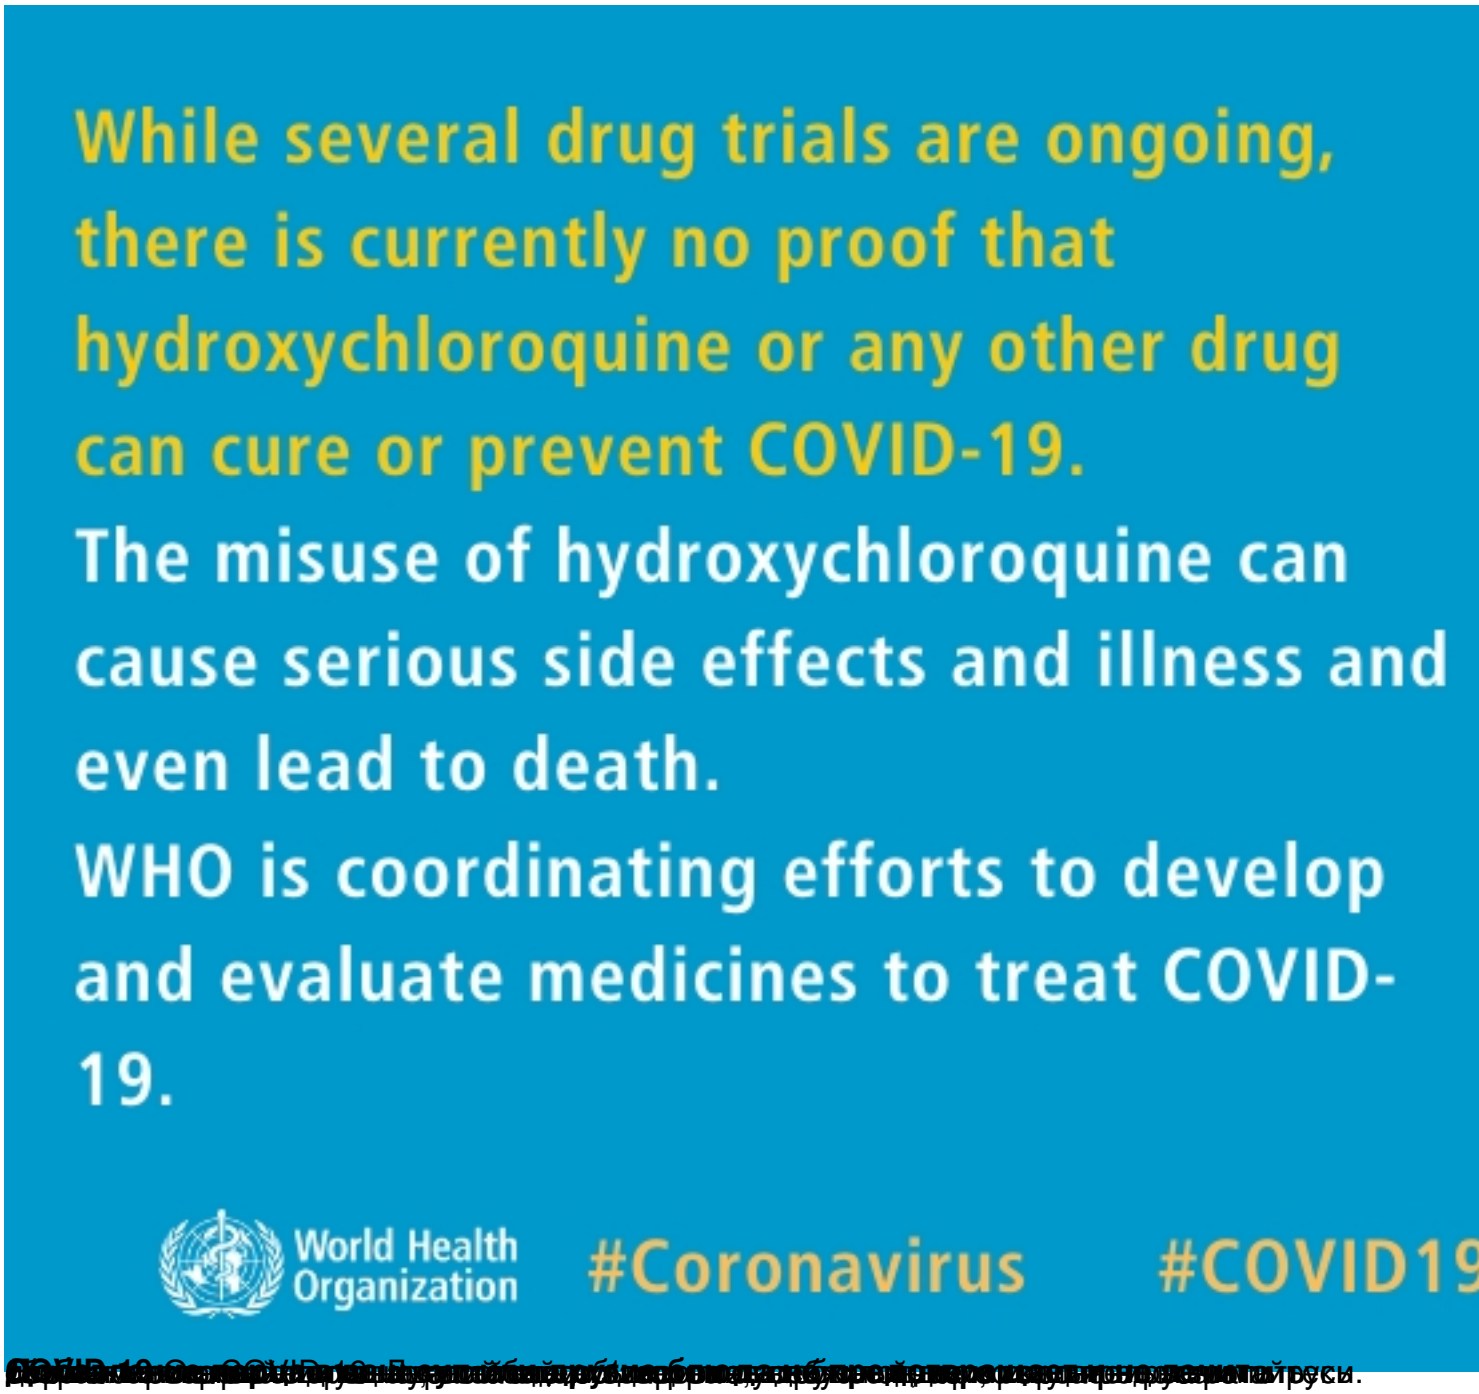

Употребление алкоголя не защищает вас от COVID-19 и может быть опасным.

Thermal scanners are effective in detecting people who have a fever (i.e. have a higher than normal body temperature). They cannot detect people who are infected with COVID-19.
There are many causes of fever. Call your healthcare provider if you need assistance or seek immediate medical care if you have fever and live in an area with malaria or dengue.

While several drug trials are ongoing, there is currently no proof that hydroxychloroquine or any other drug can cure or prevent COVID-19.
The misuse of hydroxychloroquine can cause serious side effects and illness and even lead to death.
WHO is coordinating efforts to develop and evaluate medicines to treat COVID-19.

Hot peppers in your food, though very tasty, cannot prevent or cure COVID-19.
The best way to protect yourself against the new coronavirus is to keep at least 1 metre away from others and to wash your hands frequently and thoroughly.
It is also beneficial for your general health to maintain a balanced diet, stay well hydrated, exercise regularly and sleep well.
World Health Organization

To date, there is no evidence or information to suggest that the COVID-19 virus is transmitted through houseflies.
The virus that causes COVID-19 spreads primarily through droplets generated when an infected person coughs, sneezes or speaks.
You can also become infected by touching a contaminated surface and then touching your eyes, nose or mouth before washing your hands.
To protect yourself, keep at least 1-metre distance from others and disinfect frequently-touched surfaces. Clean your hands thoroughly and often and avoid touching your eyes, mouth and nose.

Do not under any circumstance spray or introduce bleach or any other disinfectant into your body. These substances can be poisonous if ingested and cause irritation and damage to your skin and eyes.
Bleach and disinfectant should be used carefully to disinfect surfaces only.
Remember to keep chlorine (bleach) and other disinfectants out of the reach of children.

27 April 2020

There is no reason to believe that cold weather can kill the new coronavirus or other diseases.
The normal human body temperature remains around 36.5°C and 37°C, regardless of the external temperature or weather.
The most effective way to protect yourself against the new coronavirus is by frequently cleaning your hands with alcohol-based hand rub or washing them with soap and water.
World Health Organization

FACT:
Taking a hot bath does not prevent the new coronavirus disease

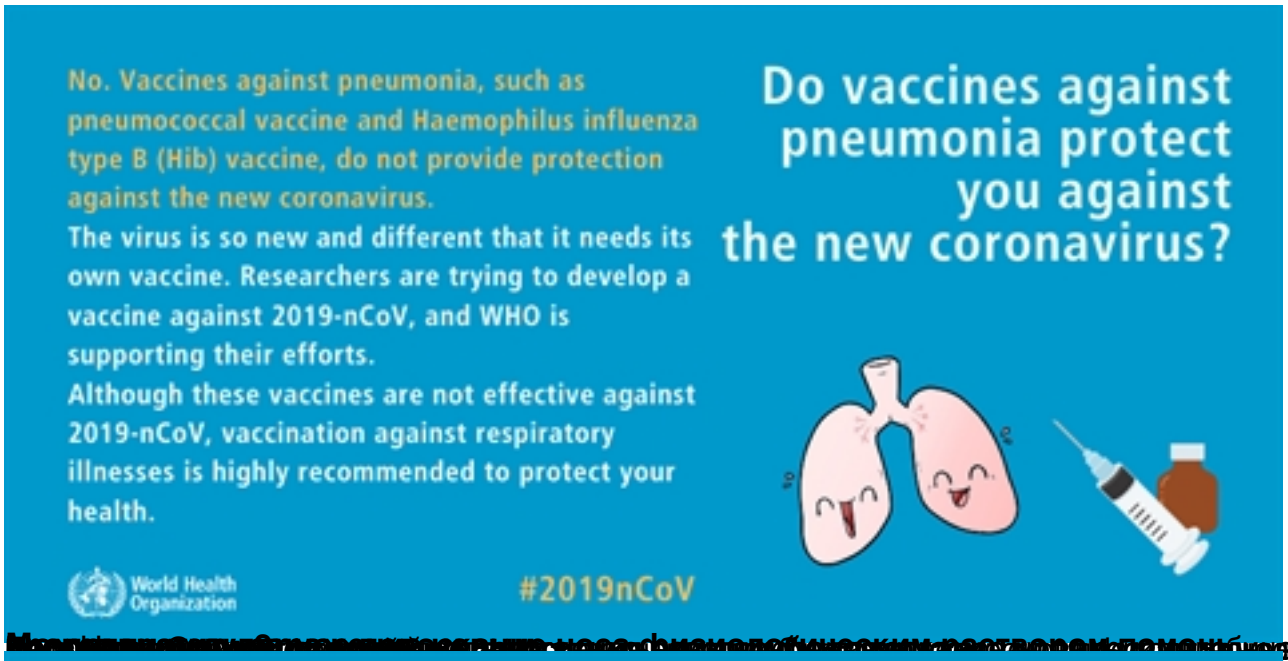

To date there has been no information nor evidence to suggest that the new coronavirus could be transmitted by mosquitoes.
The new coronavirus is a respiratory virus which spreads primarily through droplets generated when an infected person coughs or sneezes, or through droplets of saliva or discharge from the nose.
To protect yourself, clean your hands frequently with an alcohol-based hand rub or wash them with soap and water. Also, avoid close contact with anyone who is coughing and sneezing.

FACT:
The new coronavirus CANNOT be transmitted through mosquito bites

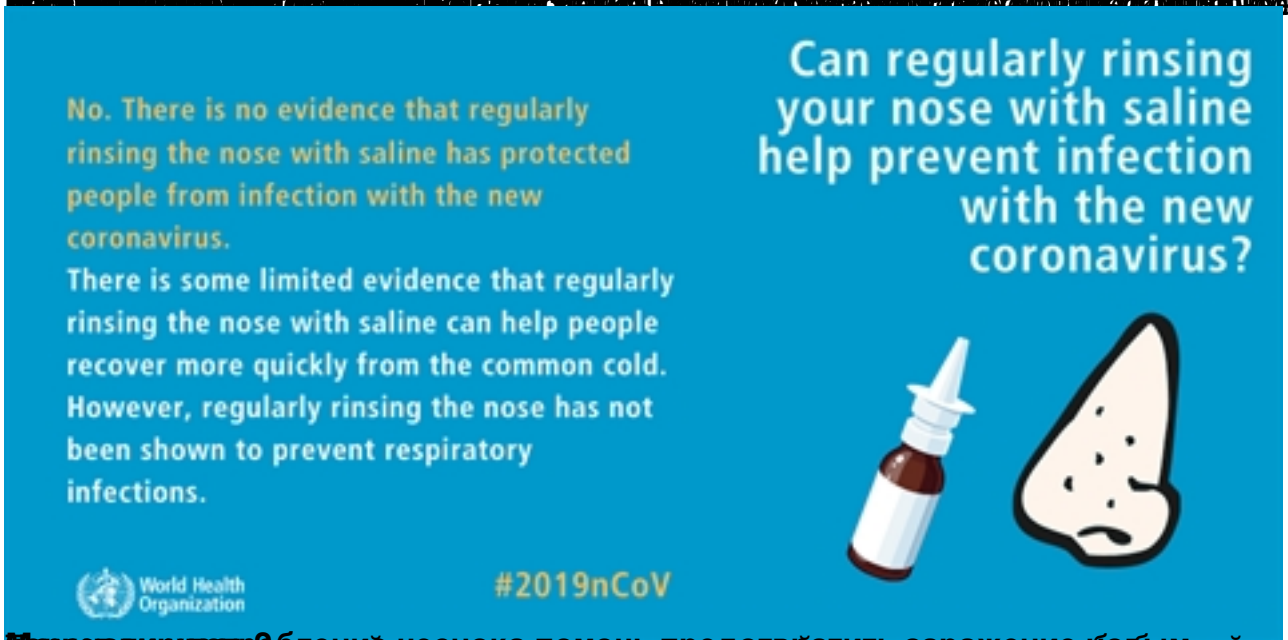

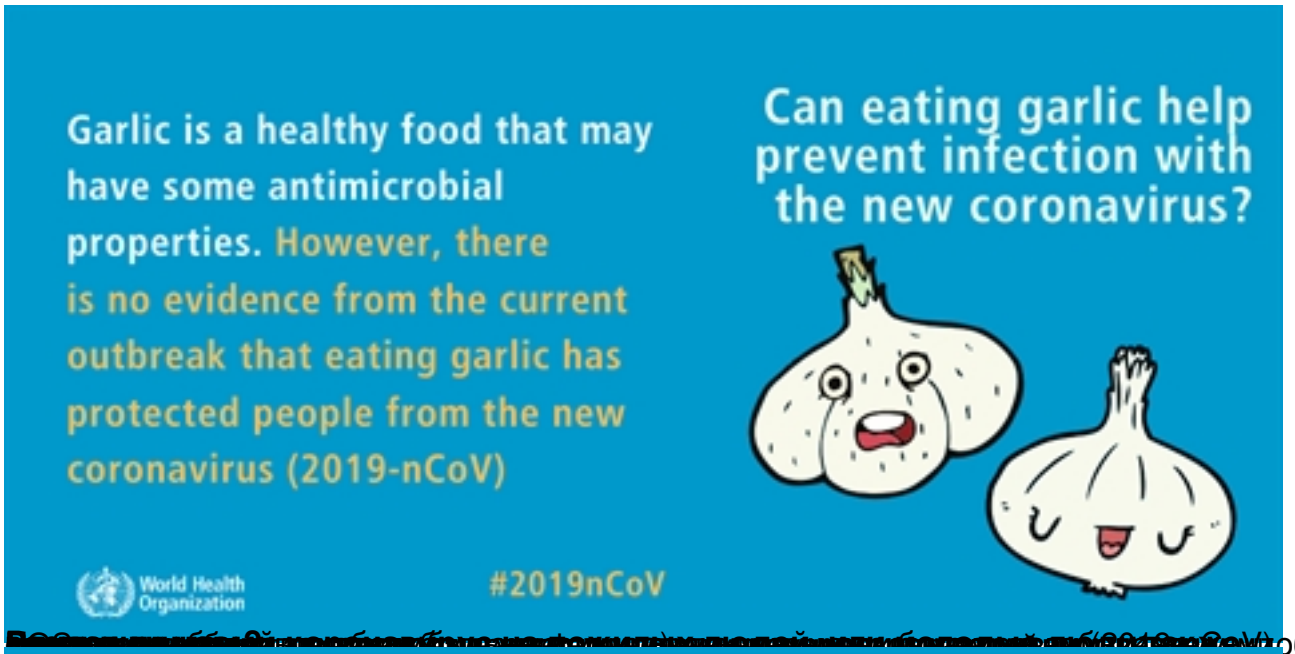

Ультрафиолетовые (УФ) лампы не должны использоваться для дезинфекции рук или

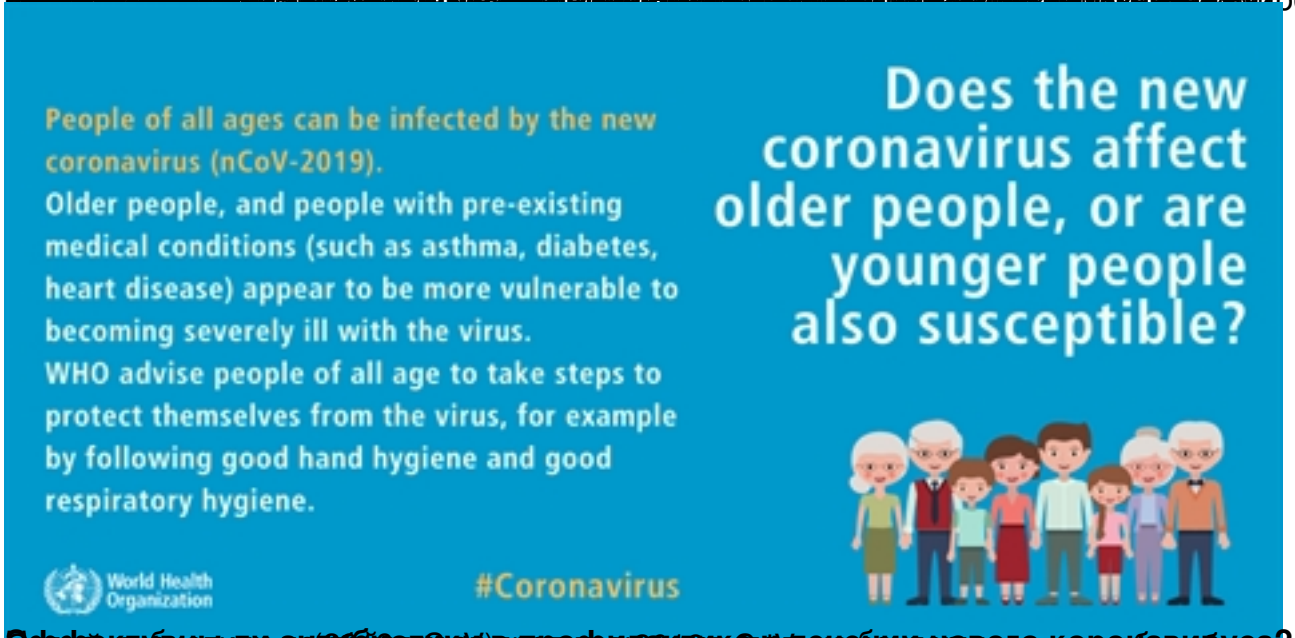

Защищать себя от возможного воздействия.

Do vaccines against pneumonia protect you against the new coronavirus?
No. Vaccines against pneumonia, such as pneumococcal vaccine and Haemophilus influenza type B (Hib) vaccine, do not provide protection against the new coronavirus.
The virus is so new and different that it needs its own vaccine. Researchers are trying to develop a vaccine against 2019-nCoV, and WHO is supporting their efforts.
Although these vaccines are not effective against 2019-nCoV, vaccination against respiratory illnesses is highly recommended to protect your health.
World Health Organization

Can regularly rinsing your nose with saline help prevent infection with the new coronavirus?
No. There is no evidence that regularly rinsing the nose with saline has protected people from infection with the new coronavirus.
There is some limited evidence that regularly rinsing the nose with saline can help people recover more quickly from the common cold. However, regularly rinsing the nose has not been shown to prevent respiratory infections.
